

Intro to Natural Language Processing with Python

Spring 2020 – IFSC 4399 03

Days & Time: MW 4:30 – 5:45 pm

Instructor: Zachary Stine

Description: Curious about how computers “understand” human languages? In this class, we will explore the field of natural language processing, and learn how text—whether from books, social media, poetry, newspapers, etc.—can be transformed into data for computational analysis.

In addition to gaining general knowledge about the field, students will also gain practical experience through hands-on exercises using the Python programming language.

Prerequisites: Some programming experience in any language will be helpful, but is not absolutely required.
